### **Renewable Energy**

The prospect of producing clean, sustainable power in substantial quantities from renewable energy sources is now arousing interest world-wide, stimulated by recent technological developments that have improved the cost-effectiveness of many of the 'renewables' and by increasing concern over the environmental impact and sustainability of conventional fossil and nuclear fuel use. This book provides a comprehensive overview of the principal renewable energy sources including: DT Solar thermal DT Photovoltaics DT Bioenergy DT Hydro DT Tidal DT Wind DT Wave DT Geothermal With the aid of over 350 detailed illustrations, more than 50 tables of data and a wide range of case studies it explains, for each source, the underlying physical and technological principles, and examines its environmental impact and future prospects. The overall approach is interdisciplinary, covering the economic, social, environmental and policy issues raised by renewable energy as well as the physical and engineering aspects. The book will therefore appeal strongly to non-specialist readers who wish to improve their understanding of this complex, fascinating and increasingly important subject. New to this Edition - Full colour design - Updated to reflect developments in technology. policy and attitudes - Complemented by a new book on traditional sources of energy, Energy Systems and Sustainability edited by Godfrey Boyle, Bob Everett and Janet Ramage of the Open University

### **Renewable Energy, 2/E**

\u200bThis book offers a detailed account of how renewable energy has moved from the margins to the mainstream in the UK, and of the battles that have been fought to achieve this, trawling through the often troubled history of government involvement. The book examines how renewables became what now seem likely to be the dominant energy sources of the future. Renewable energy technologies, using solar and wind power and other natural energy sources, are now supplying around 30% of UK electricity and appear set to continue expanding to supply around 50% within the next decade. Although the emphasis of the book is on the UK, developments there are compared with those in other countries to provide an overall assessment of the relevance of the UK experience. Chapters explore why the UK still lags behind many other countries in deploying renewables, in part, it is argued, due to its continued reliance on nuclear power. The book ends with a discussion on what sort of changes may be expected over the coming years. The author does not

assume a single answer, but invites readers to consider the possibilities.
